- Demos
- You make DFIRMs better
- Questions

A faded background image showing a residential street completely submerged in floodwater. Houses and trees are visible in the distance, partially obscured by the water and the slide's header.

# Did you know...

- Every year, flooding causes more than \$2 billion of property damage in the U.S.
- In a high risk area, your home has a 26% chance of being damaged by a flood during the course of a 30-year mortgage, compared to a 9% chance of fire.

# Keene – October 2005

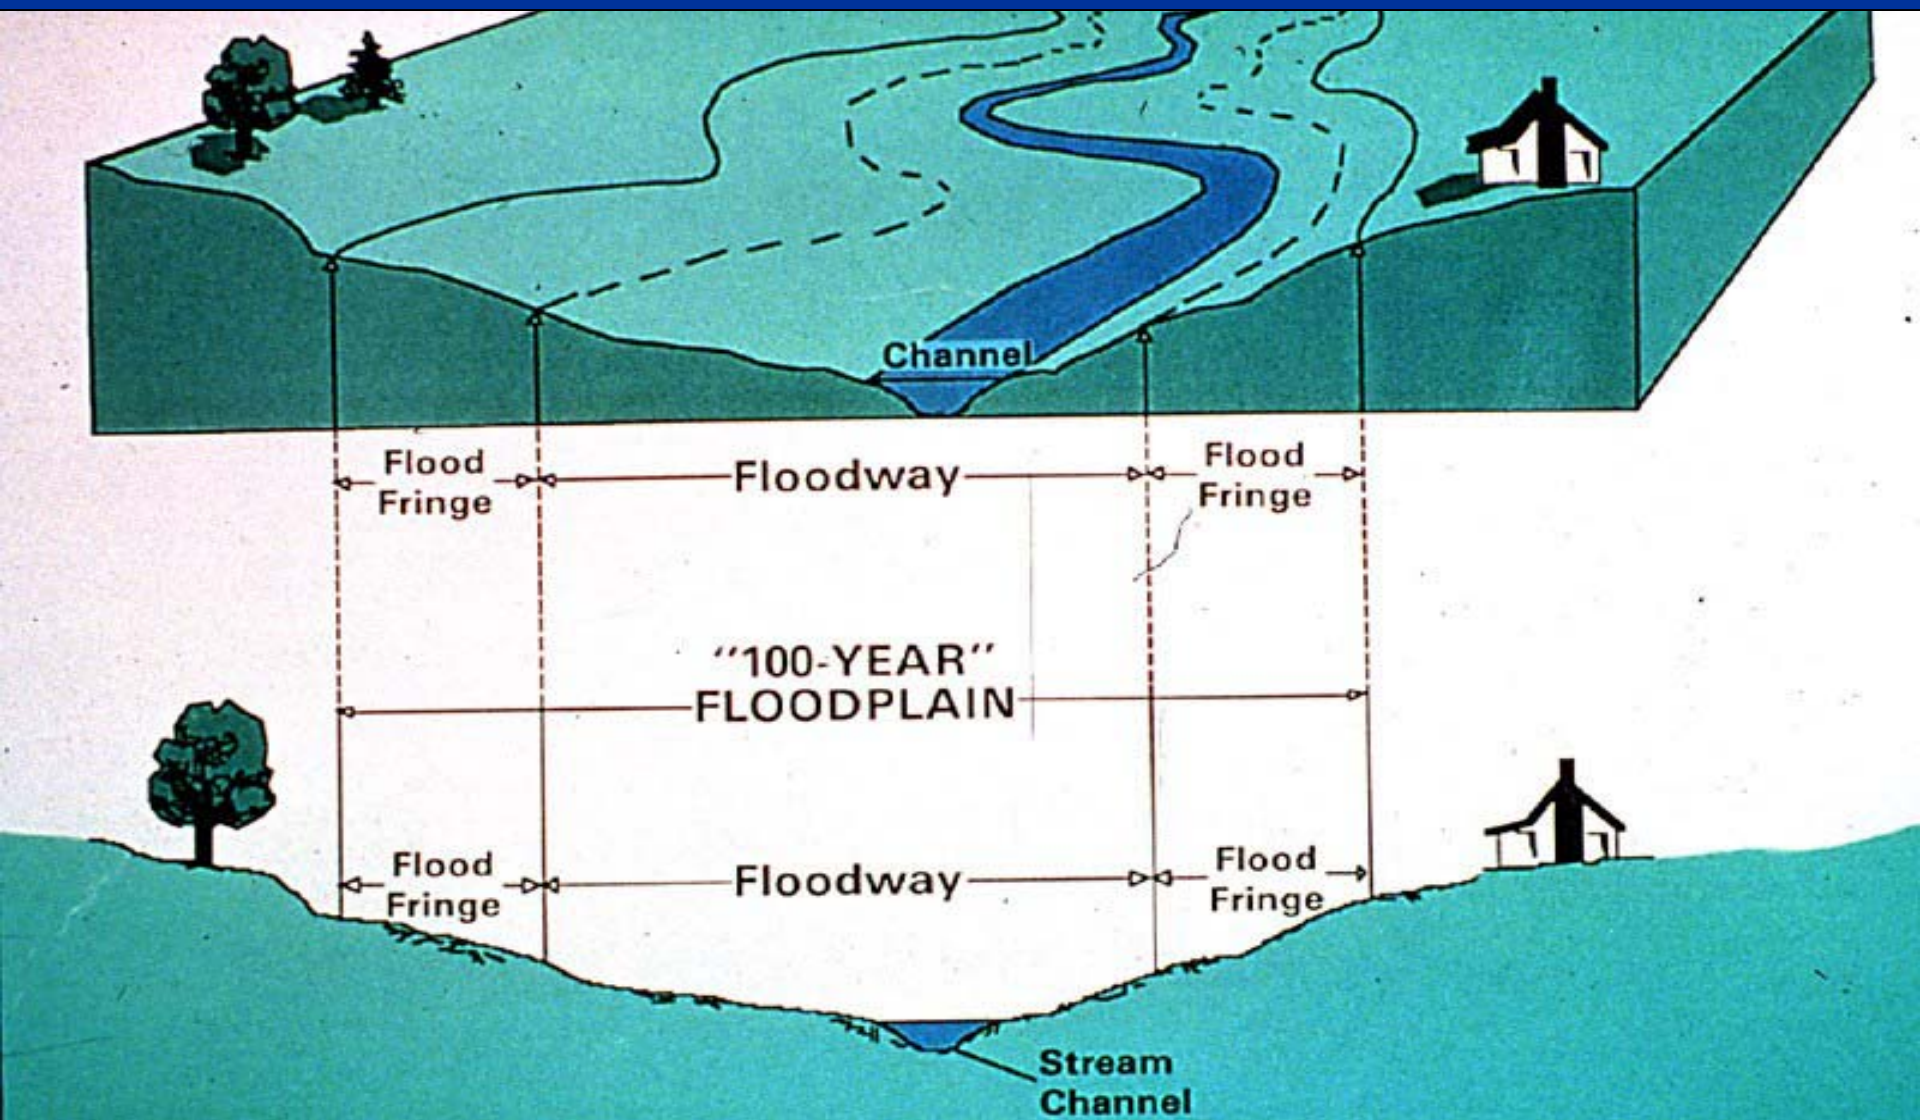

# Alstead – October 2005

# Floodplain 101

A grayscale photograph of a residential area completely inundated with floodwater. Houses and trees are visible in the background, partially submerged. The water reflects the light, creating a shimmering effect.

# Floodplain 101

## Base or 1% Flood:

A flood having a 1% chance of being equaled or exceeded in any given year; also known as the 100-year flood.

A grayscale photograph showing a residential area with houses and trees completely submerged in floodwater. The water level is high, reaching the roofs of some buildings.

# Floodplain 101

## Base Flood Elevation (BFE):

The height above sea level to which flood water would be expected to rise in a base, or 100-year flood event.

- Demos
- You make DFIRMs better
- Questions

A faded background image showing a town with houses and trees completely submerged in floodwater.

# What is NFIP?

- Voluntary and mutual agreement between the Federal Emergency Management Agency (FEMA) and a community
- Participating Communities agree to adopt and administer appropriate regulations – in return all of their residents are eligible for federally-subsidized flood insurance

# Where did NFIP come from?

- First proposed in the 1950's
- Problems discovered:
  - Funded by taxpayers; helped a few
  - Flood protection structures
  - Continued development in floodplains
  - Disaster relief – inadequate & expensive
  - Unaffordable flood insurance
- Established as part of the National Flood Insurance Act of 1968

# What is the Purpose of NFIP?

- Transfer the costs of private property flood losses from the taxpayers to floodplain property owners through flood insurance premiums.
- Provide floodplain residents and property owners with financial aid after floods, especially smaller floods that do not warrant federal disaster aid.

# What is the Purpose of NFIP?

- Guide development away from flood hazard areas.
- Require that new and substantially improved buildings be constructed in ways that would minimize or prevent damage in a flood.

A background image showing a street completely submerged in floodwater, with houses and trees visible in the distance.

# Flood Disaster Protection Act of 1973

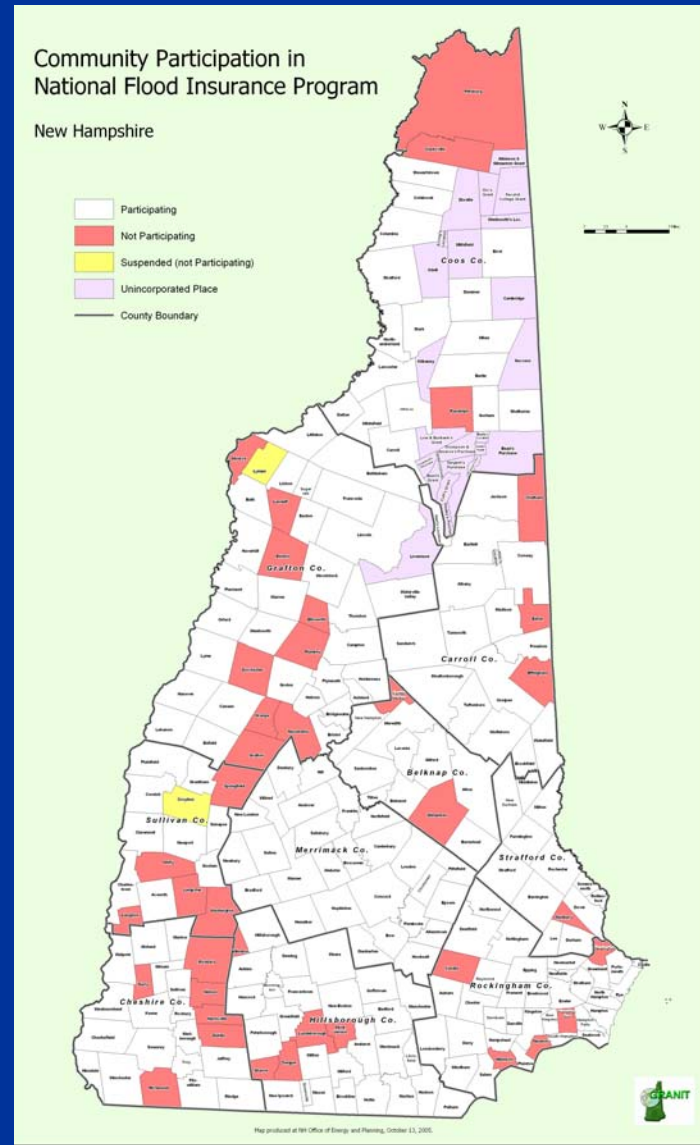

- Lending institutions cannot make, increase, extend, or renew a loan for a building located in the floodplain without NFIP flood insurance
- It is the responsibility of the lender to:
  - determine if the property is in the Special Flood Hazard Area,
  - document the determination, and
  - ensure the insurance is maintained through the life of the loan

# NFIP Community Participation

# NFIP in New Hampshire

- 194 communities (83%) participate
- 39 communities (17%) do not participate
- 2 communities are suspended

# National Flood Insurance Reform Act of 1994

- Authorized the Community Rating System
- Increased the maximum amount of flood insurance coverage,
- Established a grant program for mitigation plans and projects.
- Enacted stricter penalties on lenders to comply

# How is NFIP Funded?

- Self supporting since 1986
- Funded primarily through premium income, which pays all administrative and mapping costs as well as claims.

# How does a Community Join NFIP?

- Complete FEMA application
- Must adopt a resolution of intent to participate and cooperate with FEMA.
- Must also adopt a floodplain development ordinance and subdivision regulation language that meets or exceeds the minimum NFIP criteria.

# Community Responsibilities

- Adopt and enforce a floodplain management ordinance
- Require floodplain development permits
- Review permits to assure that sites are reasonably safe from flooding
- Carefully consider requests for variances
- Maintain records of floodplain development

# What Happens if a Community Doesn't Participate?

- NFIP flood insurance will not be available.
- No Federal grants or loans for development may be made in identified flood hazard areas under programs administered by Federal agencies such as HUD, EPA, and SBA.
- No Federal disaster assistance may be provided to repair insurable buildings located in identified flood hazard areas for damage caused by a flood.

# What Happens if a Community Doesn't Participate?

- No Federal mortgage insurance or loan guarantees may be provided in identified flood hazard areas. This includes policies written by FHA, VA, and others.
- Federally insured or regulated lending institutions, such as banks and credit unions, must notify applicants seeking loans for insurable buildings in flood hazard areas that:
  - There is a flood hazard and
  - The property is not eligible for Federal disaster relief.

# NFIP Basic Parts

**Insurance**

**Regulations**

**Maps**

# NFIP Basic Parts

# Insurance

# Flood Insurance

- **Anyone** living in a participating community can purchase flood insurance, whether their building is located in the floodplain or not.
- For those living in communities that do not participate, insurance is available from private insurers (e.g. Lloyd's of London), and can be hard to find and costly.

# Flood Insurance Stats - Nationwide

## Total Policies in Force by Calendar Year

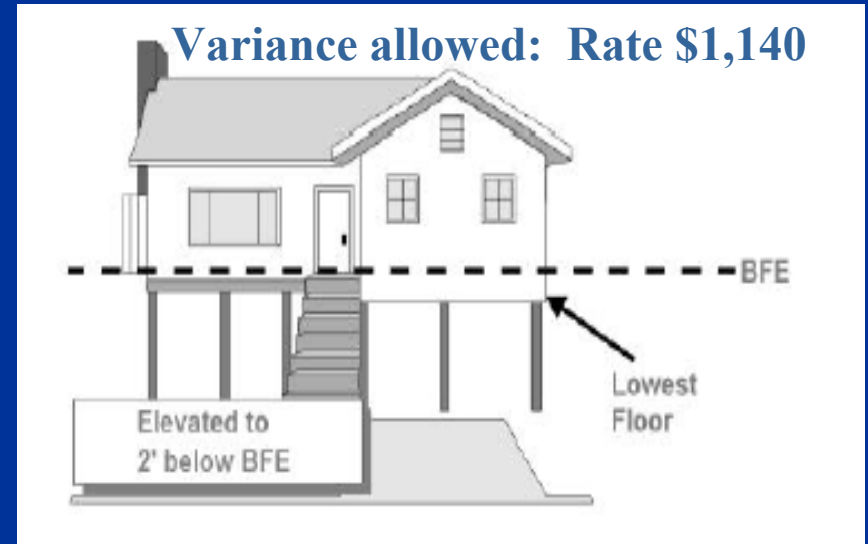

A background image showing a flooded street with water reaching up to the windows of houses and trees. The image is faded and serves as a backdrop for the title.

# **Flood Insurance Stats – New Hampshire**

- Currently over 6,500 Policies (almost 50% in Rockingham County)
  - \$984 million in coverage
  - \$4 million in premiums
- 964 Preferred Risk Policies

# Flood Insurance as it Relates to Regulations

- Building not built to regulations = very high premiums or insufficient coverage

- Building built to minimum regulations or more = pay less

# Regulations

# Floodplain Development Ordinance

- Regulations are contained in 44 CFR 60.3
- NH OEP has developed a model floodplain development ordinance for communities to use and adopt to meet NFIP minimum requirements
- Communities are strongly encouraged to include language that goes beyond minimum requirements

# Floodplain Development Ordinance

- All proposed development in the designated floodplain shall require a permit
- Review permits to assure that sites are reasonably safe from flooding

FEDERAL EMERGENCY MANAGEMENT AGENCY

NATIONAL FLOOD INSURANCE PROGRAM

ELEVATION CERTIFICATE

AND  
INSTRUCTIONS

# Floodplain Development Ordinance

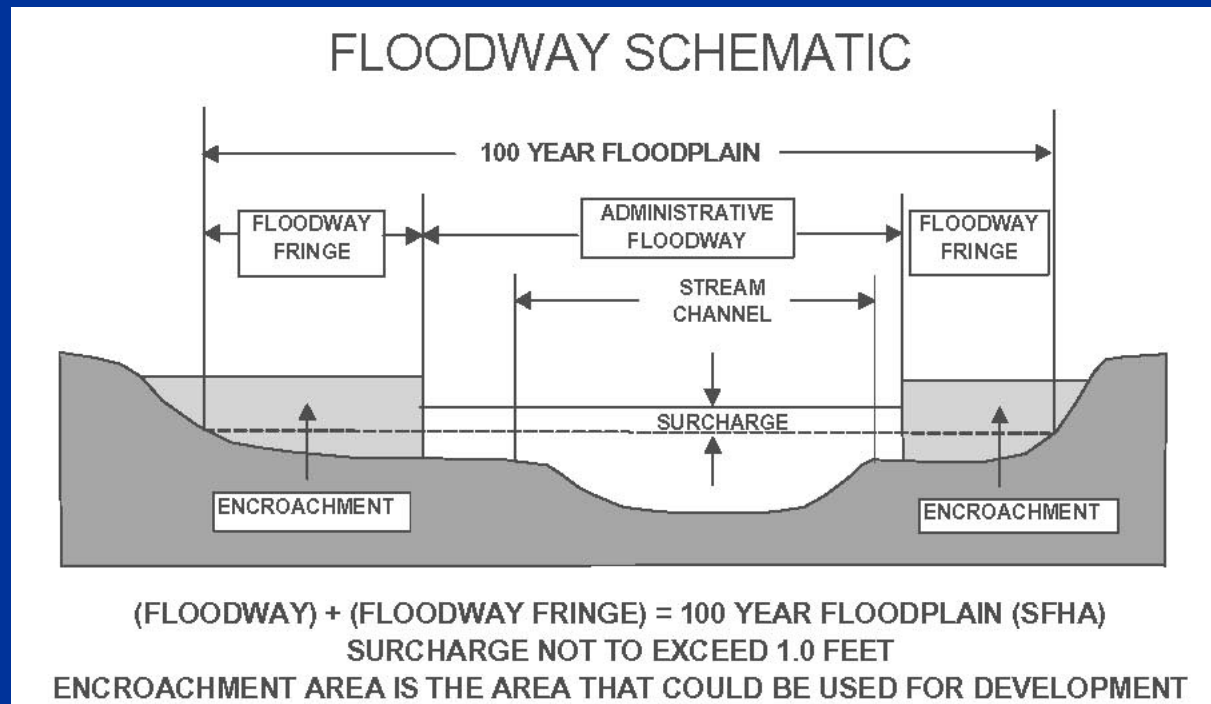

Requires that new and substantially-improved or damaged buildings be elevated or constructed to resist flood damages

**Elevated Foundation**

# Floodplain Development Ordinance

Prohibits new development or substantial improvements that would increase flood heights in designated floodways

# Floodplain Development Ordinance

New or substantially-improved manufactured homes should be elevated on a permanent foundation and be securely anchored

# Floodplain Development Ordinance

Utilities should be designed and/or located so as to prevent water from entering or accumulating

# Floodplain Development Ordinance

## Coastal high hazard areas

- all new construction or substantial improvements should be elevated on pilings and columns

# Floodplain Development Ordinance

## Coastal high hazard areas

- Space below lowest floor must be either free of obstructions or constructed to collapse under wind and water loads without causing damage to the structure

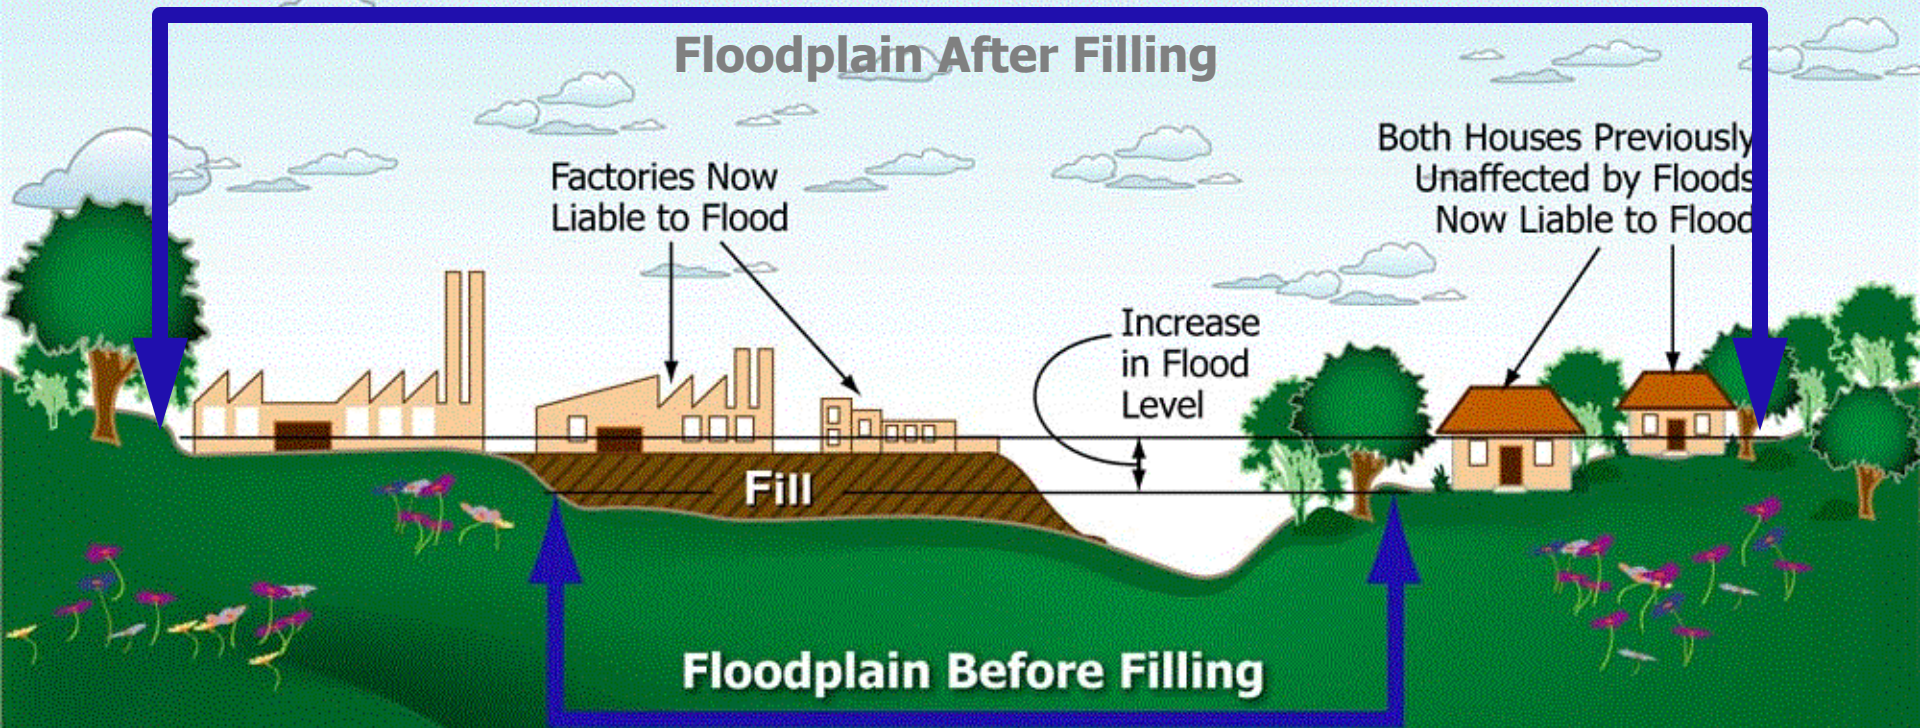

# Maintaining Compliance with NFIP

- A community's floodplain management program and permit records are reviewed periodically by FEMA Region 1, OEP, or RPC
- Community assistance visit (CAV) – Completed about every 5 years

# Today's Floodplain Is Not Necessarily Tomorrow's Floodplain

**If large areas of the floodplain are filled, then there will be an increase in the land area needed to store flood waters.  
This means your home or business may be impacted.**

# Community Rating System

- Voluntary program
- Participating communities can get credits for implementing certain activities above and beyond the minimum requirements of NFIP.
- Residents can get a certain percent reduction in their flood insurance premium rates based on the credits their community earns

# Community Rating System

## Activity Categories

- Public Information
- Mapping and Regulations
- Flood Damage Reduction
- Flood Preparedness

# Community Rating System

- As of Oct. 2005 – 1,028 communities nationwide
  - Tulsa, OK – Class 2 (40% discount)
- 5 communities in NH
  - **Keene** – Class 8 (10 % discount)
  - **Marlborough** – Class 9 (5 % discount)
  - **Peterborough** – Class 8 (10 % discount)
  - **Rye** – Class 9 (5 % discount)
  - **Winchester** – Class 9 (5 % discount)

A background image showing a residential street that has been completely inundated with floodwater. Houses and trees are visible in the background, partially obscured by the water and the blue overlay.

# No Adverse Impact

- Developed by the Association of State Floodplain Managers (**[www.floods.org](http://www.floods.org)**)
- Goes beyond federal and state program requirements
- Tools for communities to provide a higher level of protection for their citizens and to prevent increased flooding now and in the future

- Hazard Identification & Floodplain Mapping
- Education and Outreach
- Planning
- Regulations & Development Standards
- Mitigation
- Infrastructure
- Emergency Services

- Questions

# What is GIS?

Geographic  
Information  
System

# What is GIS?

A **computer system** consisting of hardware and software that utilizes relational database technology and a topological data structure to allow the integration of raster and vector spatial data with tabular information for display, edit, query, analysis, combination, creation, maintenance, and management of **geographic data** sets in an environment that is customizable to meet the application needs of the users forming a powerful network of information that facilitates the sharing of data for **better decision-making**.

# What is GIS?

A Method of **Organizing** Information

- **Geographic Data (Maps)**
- **Descriptive Data (Databases)**
- **Images (Photographs, Satellite Imagery)**

- A Method of **Analyzing** Data
- A Method of **Visualizing** Data
- A Method of **Distributing** Data

# What is GIS?

## How GIS Works

- Information is stored as a collection of layers that can be linked together by a location on the earth.

# What is GIS?

## Why Use GIS?

- To explore **relationships** between **features** distributed over **space** looking for **patterns** that might not be obvious.

# What is GIS?

- Cost Savings (Operational Efficiencies)
- Better Data Management  
(More Efficient Storage and Updating)
- Better Decisions  
(Faster Information Access)
- Enhanced Capability (New Applications)

# Overview of Presentation

- Floodplain 101

- Questions

# GRANIT

- Central data warehouse at Complex Systems Research Center, UNH, Durham
- Multiple data providers and data users
  - State government
  - Regional offices of federal agencies
  - Regional planning agencies
  - Municipalities
  - Non-profit organizations
  - Private sector
- Coordinating Committee – NH GIS Advisory Committee (est. 1987)
- FGDC/NSDI participant

# GRANIT

- **Mission**

To promote the efficient use of New Hampshire's diverse resources by utilizing spatial information in an effective way and by providing geographic information and related tools to citizens and organizations.

- **How we strive to meet this mission:**

- Data development/archiving/distribution
- Coordination/standards development
- Applications/spatial analysis
- Training and technical support

# GRANIT

- Objectives
  - **Improve** state and local government **decision-making**
  - **Maximize limited financial resources** and avoid duplication in creating and updating elements in the statewide database through coordination of agency efforts
  - Encourage **multi-disciplinary** and **interagency** cooperation
  - Serve a centralized GIS database function, providing **access to and distribution of information** for the benefit of federal, state and local decision-makers and the public

# GRANIT

- Resources

Software: ArcGIS 9.1, ArcSDE 9.1, Leica Imagine 9.0, Trimble Pathfinder Office

Hardware: Plotters, scanners, digitizing tablets, GPS units

People: 6 full-time GRANIT staff, 5 part-time students, systems support staff

# GRANIT

## GIS – Integrating Technology

# GRANIT

## NH GRANIT Project Overview Current Projects – March, 2006

PROJECT	SUPPORTED BY:	DESCRIPTION
Core Funding	NH Office of Energy and Planning NH Dept of Environmental Services NH Dept of Resources and Economic Development NH Dept of Transportation	Conduct basic GRANIT activities, including data maintenance, data distribution, web site maintenance, and provision of technical training and support.
GRANIT Web Site Enhancement	NH GIS Conservation Collaborative (NHGCC)	Develop online data mapping tools; enhance web site
NH GIS Strategic Plan – pending, in cooperation with OEP	USGS	Develop strategic and business plan for GIS in the State of New Hampshire
Map Modernization Management System	FEMA	Outreach and technical support to NFIP program in the state
Coos DFIRMs	FEMA – CTP	Develop preliminary DFIRM data
Merrimack DFIRMs	FEMA - CTP	Process preliminary data and generate preliminary DFIRM maps
Conservation Framework	NH Dept of Transportation	Develop conservation framework protocol within the I-93 corridor; initiate CommunityViz Resource Center
Historic Quads	UNH Office of the Vice President for Research and Public Service	Scan and georeference historic USGS topographic maps
Forest Stands Mapping	NH Dept of Resources and Economic Development	Develop data sets for state forests
Conservation Lands Update	NH Estuaries Project	Update conservation lands data layer
Impervious Surface Mapping	NH Estuaries Project	Develop time series of impervious surface coverage
Coastal Buffer Analysis	NH Estuaries Project	Characterize buffers within coastal watersheds
Parcel Pilot - pending	NH Dept of Transportation	Refine town boundaries and produce parcel mosaic for 3-town pilot area

# Overview of Presentation

- NFIP Background
- NFIP Overview
- What is GIS?
- GRANIT
- Map Mod in NH
- Differences between FIRM and DFIRM
- Demos
- You make DFIRMs better
- Questions

# Map Mod in New Hampshire

- FFY 2003 FEMA initiated a Flood Map Modernization Program (FMMP)
- Goal – upgrade flood hazard data to create a more accurate digital product that will improve floodplain management across the country
- Five year program
- Priority given to areas with greater population, need, and ability to leverage resources

# Map Mod in New Hampshire

- Collaborators
  - GRANIT at Complex Systems Research Center
  - NH Office of Energy and Planning
  - FEMA

# Map Mod in New Hampshire

- Why
  - New/standard technology
  - Seamless coverage
  - Spatial analysis
  - Data currency/management
  - Multiple distribution options
  - Facilitates future updates

# Map Mod in New Hampshire

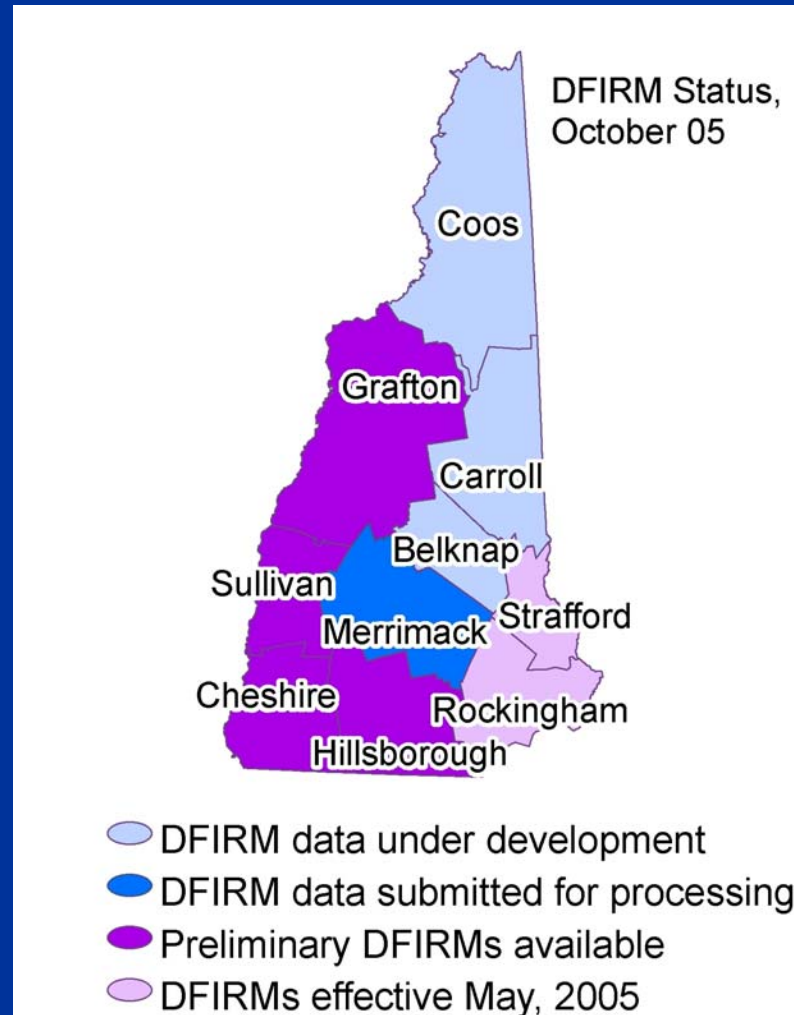

- Outcomes
  - Digital data
  - Web-based
  - Transfer knowledge from feds to local gov't
  - Local ownership of the data

# Map Mod in New Hampshire

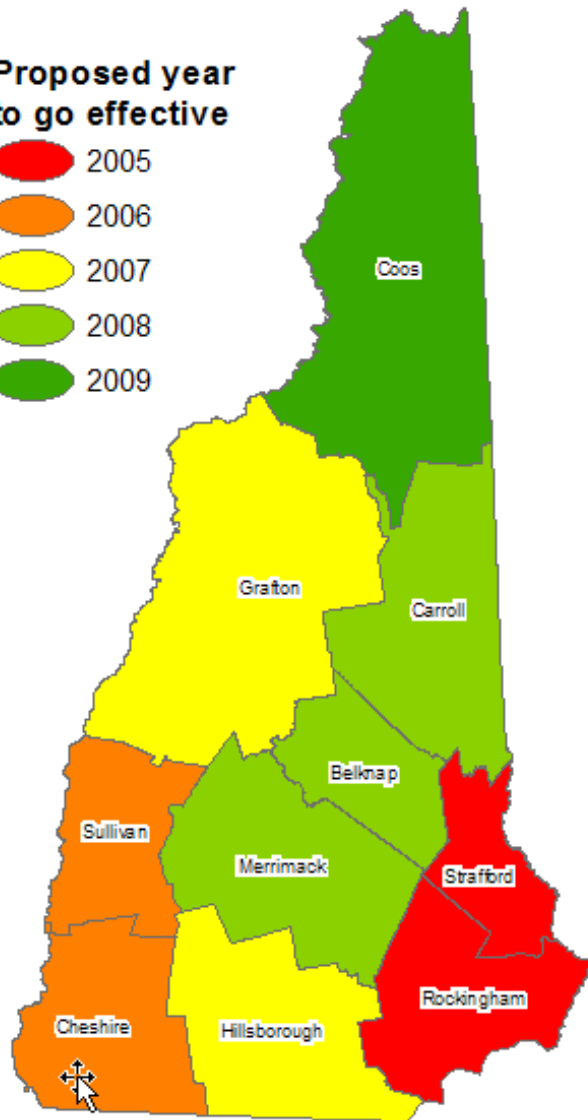

- Benefits
  - Help to prevent and reduce losses
  - Pooling resources
  - Involving all stakeholders in the process
  - Eventually, local stakeholders will be able to add their own data to the DFIRMs

# Map Mod in New Hampshire

# Map Mod in New Hampshire

Proposed year  
to go effective

- ***Effective*** DFIRMs and FIS
  - Rockingham 5/2005
  - Strafford 5/2005
- ***Preliminary*** DFIRMs and FIS
  - Cheshire 5/2006
  - Sullivan 5/2006
  - Grafton spring 2007
  - Hillsborough spring 2007
- ***Proposed*** DFIRMs and FIS
  - Belknap spring 2008
  - Carroll spring 2008
  - Merrimack spring 2008
  - Coos spring 2009

# Overview of Presentation

- Floodplain 101
- NFIP Background
- NFIP Overview
- What is GIS?
- GRANIT
- Map Mod in NH
- Differences between FIRM and DFIRM
- Demos
- You make DFIRMs better
- Questions

# Differences between FIRM and DFIRM

- FIRMs v DFIRMs
  - Paper v digital products
  - Seamless coverage
  - Spatial analysis
  - Facilitates future updates

# DFIRM Methodology

## Assemble primary data sources

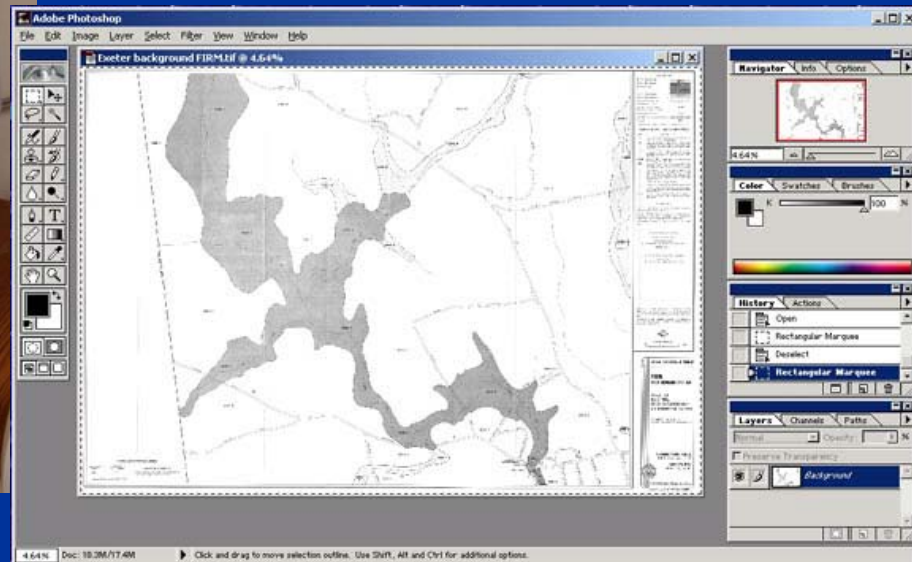

- Published FIRMs
- LOMRs
- DOQs
- Other GRANIT data (town bounds)
- Locally available data (e.g. Salem road data)
- DOT road names

# DFIRM Methodology

## Scan source maps

- Acquire images (in-house or contract scanning or FEMA Map Store)
- Process images with Photoshop

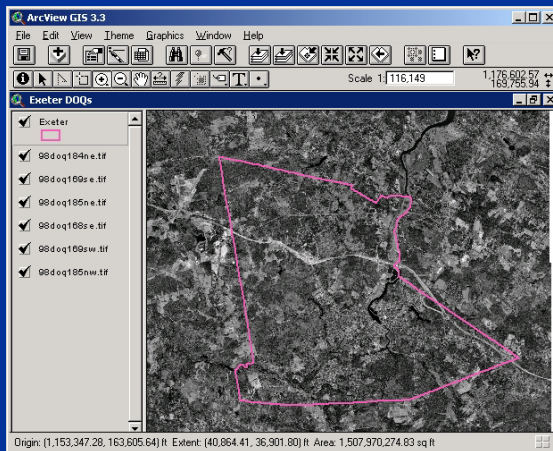

# DFIRM Methodology

## Create updated base map

- Mosaic DOQ tiles for a town
- Screen-digitize streams/water bodies
- Print base map on stable media - DOQs with newly compiled streams and town boundaries

# DFIRM Methodology

## Automate floodplain features

# DFIRM Methodology

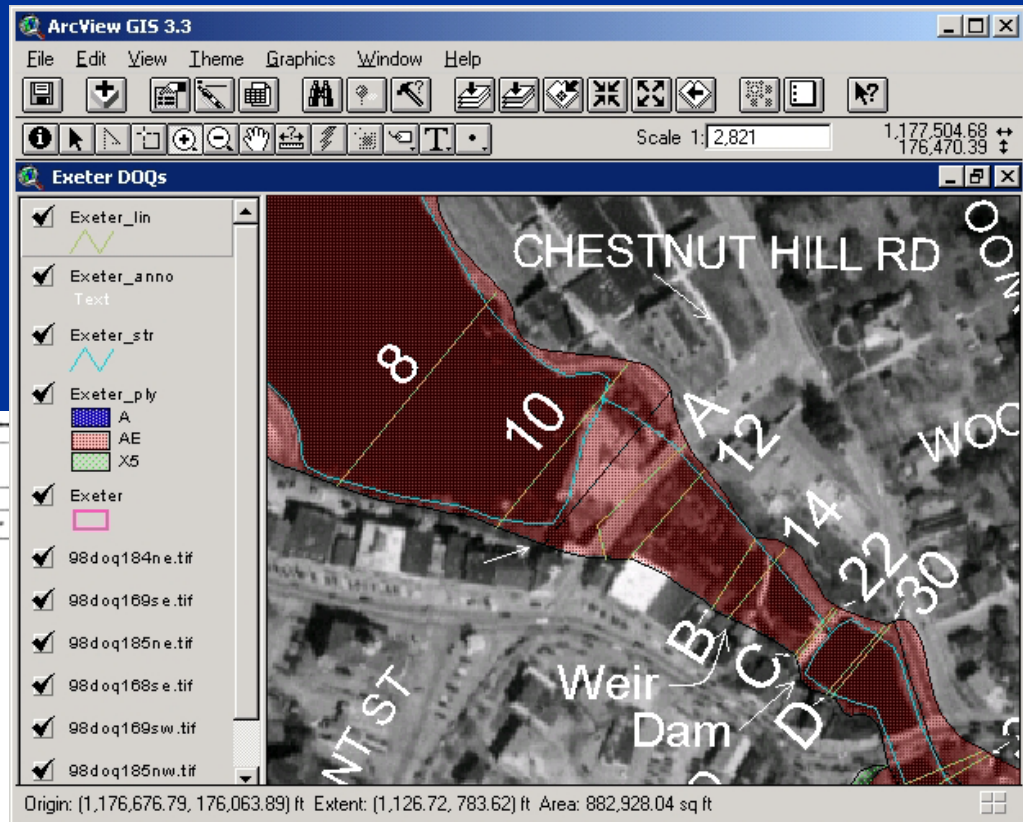

## Develop cross section data

# Overview of Presentation

- Floodplain 101
- NFIP Background
- NFIP Overview
- What is GIS?
- GRANIT
- Map Mod in NH
- Differences between FIRM and DFIRM
- **Demos** DFIRMs **and** IMS
- You make DFIRMs better
- Questions

# Overview of Presentation

- Floodplain 101
- NFIP Background
- NFIP Overview
- What is GIS?
- GRANIT
- Map Mod in NH
- Differences between FIRM and DFIRM
- Demos
- You make DFIRMs better
- Questions

# You make DFIRMs better

- Not 'garbage in/garbage out'
- Best available data that can be made better with local knowledge
- This is just the beginning

# You make DFIRMs better

# You make DFIRMs better

# You make DFIRMs better

- Current contacts for getting changes added
  - Jennifer DeLong, NH OEP  
[Jennifer.DeLong@nh.gov](mailto:Jennifer.DeLong@nh.gov)
  - Brent McCarthy, FEMA I, RMC  
[bmccarthy@watershedconcepts.com](mailto:bmccarthy@watershedconcepts.com)

# You make DFIRMs better

- Future methods for making changes
  - Website to collect the errors
  - Redlining
  - Automatic updates for some data layers

## Questions?

Jennifer.DeLong@nh.gov

Jennifer.Merriam@unh.edu
